

Chemical Plant, Dewsbury

ACC Flooring was asked by one of their chemical manufacturing clients to provide a solution for one of their production areas in a short shutdown timeframe. The company has sites worldwide with over thirty being in Europe.

The first floor area had been subjected to years of wear and tear to both the pedestrian walkway areas and the production areas. The client asked for a light colour to the body of the manufacturing area to enhance the visual appearance. The walkways were to be re-instated to provide the employees with a clear and defined path to eliminate potential health and safety issues.

The whole area was mechanically prepared by scabbling machines and diamond grinders to remove all the laitance. The two coat high build epoxy coating system was installed throughout. A non-slip aggregate was scattered between coats to areas where the client deemed that there could be a potential slip hazard.

The Green walkways had a high visibility Yellow demarcation line applied to either side to embellish the appearance against a Light Grey background shade. Other demarcation in Mid Blue, Red and Buff was installed to give clear the employees specific areas to store raw materials and work-in-progress.

Completed in a three day programme ahead of schedule causing the client no additional downtime, the contrast before and after the work was completed was astonishing. So much so that the client asked that the mezzanine area above the first floor is completed at their next available shutdown.

Project Type:

Industrial

Installation Type:

Epoxy Coating & Demarcation

Finish Type:

Epoxy Coating FeRFA Type 3
