

## Manufacturer of Cosmetics & Toiletries, West Yorkshire

ACC Flooring was asked by a long standing client to carry out further works to their manufacturing unit in Bradford. The Tube Saving area was in need of refreshing as the existing high build epoxy coating had been damaged in several places and the pedestrian walkways required re-instating.

The total area of 470m<sup>2</sup> had to be prepared and installed over a three day period including weekend hours to minimise any disruption to the clients manufacturing output.

The substrate to all three areas was shotblasted to strip, clean and profile the floor surfaces to enhance the performance of the epoxy application. The escape of dust, debris and other particles is minimised by using closed circuit machinery for a safe and clean surface preparation process.

Due to the condition of the substrate to the new changing facility an epoxy scratchcoat was initially installed to improve the appearance of the completed installation. A top coat of ACC HB SF, solvent free, high build epoxy coating was applied including the back-rolling of a slip resistant Chelford aggregate.

ACC HB SF is available in a high gloss finish and offers a fully sealed surface with both good chemical and abrasion resistance properties and ease of cleaning. With a medium duty classification and an anticipated life expectancy of a minimum 7 years, the product is ideal for general industry, warehouse flooring and vehicle workshops and is available in a wide range of colours. Altro Line is the ideal solution for detailing isolated areas, spaces pedestrian crossings, walkways and other forms of demarcation and is available in four standard colours in a high gloss finish including Safety Yellow, White, Black and Safety Red.

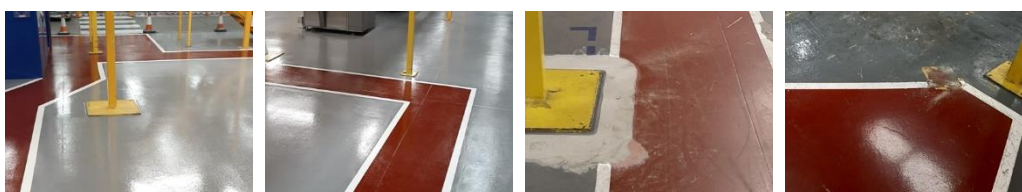

The work was completed in the agreed timescale and the client was delighted with the results.

**Project Type:**  
Industrial

**Installation Type:**  
Epoxy Coatings & Demarcation

**Finish Type:**  
FeRFA Type 3
